

Masalles

Dear Breeder,

Thank you for trusting Masalles and acquiring our vitamin complex “**Falcon Top Complex**”.

The original Top Complex formula was created and specifically for hawks and to cover all your needs. It specifically provides nutrients, vitamins, amino acids, fats and minerals for maintenance, molting, reproduction and flight. With a palatability fully accepted by hawks and with the necessary amount of pigments for a perfect jalde.

All its components, of easy assimilation and of the best quality of the specific market to the special care of all falconiform species, with special attention to captive falcons. Created with top quality ingredients, metabolic steps are avoided in the most important organs, the organic forms of the improved components, their absorption and assimilation and at the same time the incorporation of natural and regenerative antioxidant compounds complement their care.

BASIS

The feeding of the birds of prey in captivity is usually based on chicks or quails that follow a little varied feeding in the productive system of which they provide and conform homogeneous batches with respect to the nutritional contributions. Due to multiple factors depending on the requirements of the hawk at that time and the contributions of the food itself, care or punctual imbalances occur on many occasions affecting all important nutrients such as essential amino acids, minerals, essential fatty acids and sugars. If the food is not complementary, these specific concerns become important deficiencies that affect the organs or systems, as important as the immune system.

When defrosted food is supplied there is loss of protein and vitamins by freezing and / or defrosting, fats become rancid in a very short time and in these cases it is more necessary if the complementary feeding of birds of prey of captivity is possible.

MAIN ADVANTAGES:

- * Contribution of free amino acids, assimilable minerals, vitamins, essential fatty acids and sugars.
- * Stimulates the digestive process in its different phases, improving protein and energy metabolism.
- * Increases the capacity of your immune system and its physical and reproductive capacity.

HOW TO USE:

Mix with the food at a rate of 0.5 to 1gr per kg of bird weight. Your daily supply is advised to compensate for all possible food-related concerns that are given to captive hawks.

RECOMMENDATIONS:

The most immediate effects can be seen in groups of healthy birds with a pathogen-free diet properly defrosted or fresh. The health and the intestinal flora are key factors in the absorption of nutrients and very sensitive that we recommend to evaluate by a specialist and in the help the administration of probiotics.

VETERINARY ASSISTANCE:
